April 28, 2019

We've never been huge fans ...

...But we LIVE near each other

The Present Study

What Causes How We Feel?

- Our Knowledge?
- Our Participation?
- Our Groups?
- Some combination of the above?

Guiding Questions

- Does political knowledge influence feelings towards people in other parties or ideologies?
- ② Does political participation influence feelings towards people in other parties or ideologies?
- Oo knowledge and participation interact to influence feelings towards people in other parties or ideologies?

Variables

- **1V:** Political Knowledge (0-5)
- **IV:** Political Participation (0-11)
- PV: Participant's Party ID and political ideology
- **OV:** Feelings towards . . .
 - Democrats
 - Republicans
 - 6 Liberals
 - Conservatives

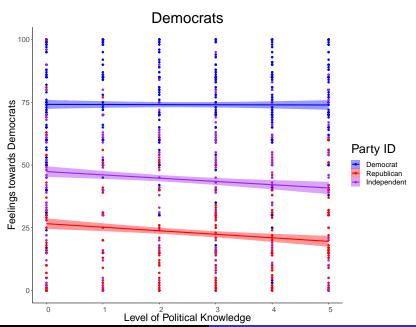

Plan for Analysis

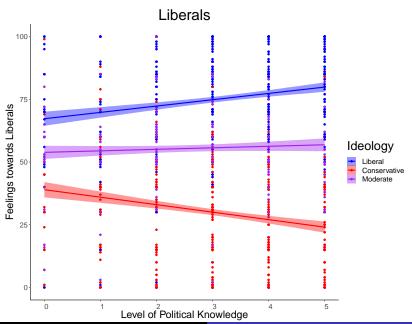

- Correlation between knowledge and feeling DVs
- Correlation between participation and feeling DVs
- 2 (Knowledge: Less or More) \times 3 (Participation: Less, Moderate, or More) ANOVA for each feeling DV

Results

Correlation: Knowledge and Feelings

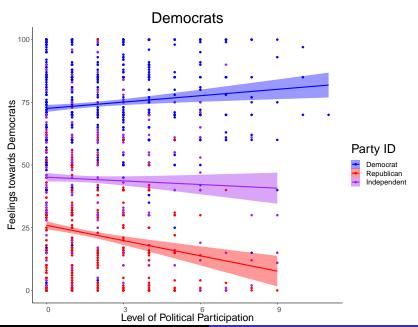

In general, the more we know does not yield more positive feelings towards each other.

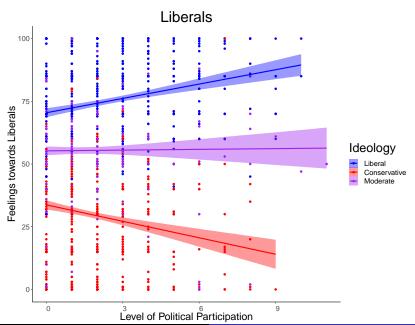

Correlation: Participation and Feelings

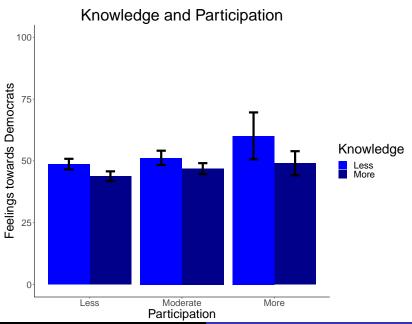

In general, the more we participate does not yield more positive feelings towards each other.

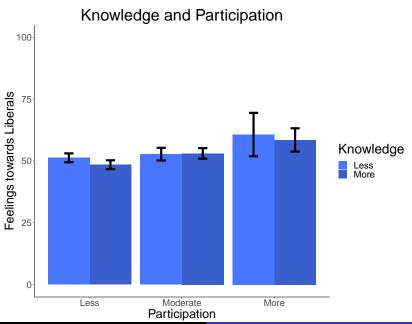

ANOVA: Knowledge \times Participation

- For feelings towards parties: There is a main effect of participation and a main effect of knowledge but no interaction
- For feelings towards ideologies: There is a main effect of participation, but no main effect of knowledge and no interaction
